## 

## WHAT IS CLAIMED IS:

1	1. A system for updating a control program comprising:
2	a stored control program unit;
3	a maintenance management server coupled with the stored control program
4	unit via a public network; wherein
5	when the maintenance management server sends an instruction to
6	update the control program to the stored control program unit, the maintenance management
7	server sends authentication data to the stored control program unit through the public
8	network; and
9	a control program upload server coupled with the stored control
0	program unit; wherein the control program upload server, after receiving and validating the
.1	authentication data via Internet, sends a control program update for processing by the stored
2	control program unit.
1	2. The system of claim 1 wherein the control program upload server
2	maintains a key history file comprising a plurality of issued authentication keys, wherein said
3	authentication data comprises one key of said plurality of issued authentication keys.
1	3. The system of claim 1 wherein said stored control program unit,
2	comprises:
3	a maintenance communication module for receiving said instruction and said
4	authentication data from said maintenance management server,
5	a device download controller module for receiving the control program
6	transferred from said control program upload server,
7	and a program update module for storing said control program received by
8	said device download controller module to a memory.
1	4. The system of claim 1 wherein said stored control program unit,
2	comprises: a maintenance communication module for receiving said instruction and said
3	authentication data from said maintenance management server, and a program file for
4	receiving the control program transferred from said control program upload server.
1	5. The system of claim 1 further comprising:
2	a repeater unit, comprising one gate coupled with said stored control program
3	unit through a Local Area Network, and another gate coupled with the Internet, wherein when

ļam is

5

6 7 download controller; and

device controller.

sending said update control program from said download controller to said

1	11. The method of claim 7 further comprising sending authentication data
2	from said maintenance server to said computer system; and using said authentication data to
3	establish a connection between said computer system and said update server.
1	12. The method of claim 7 wherein said executing said command
2	comprises establishing a file transfer protocol (ftp) connection with said update server.
1	13. The method of claim 7 further comprising returning a status of the
2	updating to said maintenance server.
1	14. A remote console system for maintaining a control program of a disk
2	controller (DKC) of a plurality of disk controllers, said disk controller comprising a Service
3	Processor (SVP), said remote console system comprising:
4	a remote console download controller coupled with said SVP and operably
5	disposed to:
<b>U</b> 6	receiving a file transfer request from said SVP, said file comprising
5 6 7	said control program;
****** 8	sending said file transfer request to an update server;
<b>2</b> 9	receiving said file from said update server; and
9 9 10 10 10 10 10 10 10 10 10 10 10 10 10	sending said file to said SVP.
	15. A storage device maintenance method for updating a control program
2	stored by a device controller of a storage system, said method comprising:
3	receiving information, comprising authentication data, by said storage system
4	related to updating said control program via a first communication connection;
5	sending a request, comprising said authentication data, for an updated control
6	program to an upload server via a second communication connection, comprising an Interne
7	connection;
8	receiving said updated control program from said upload server via said
9	second communication connection; and
10	using said updated control program to update said control program.
1	16. The method of claim 15 wherein said authentication data comprises

upload server password and login identifier.

17.

11 12

by said computer center.

The method of claim 15 wherein said request further comprises control

an update feedback module for receiving a result of executing said instruction

- 1 21. The maintenance system of claim 20 further comprising an input 2 module for receiving a user request, comprising, said instruction. 1 22. The maintenance system of claim 21 wherein said request further 2 comprises, a product type, product serial number, and a control program version. 1 23. The maintenance system of claim 20 wherein said result is displayed 2 on a display screen, said result comprising an update result. 1 24. The maintenance system of claim 20 wherein said result is further sent 2 to a customer management center. 1 25. The maintenance system of claim 24 wherein said result is sent from 2 said customer management center to a user. 26. The maintenance system of claim 25 wherein said result is displayed real-time to said user. 27. A computer readable medium for storing code for updating a control 2 program of a stored control program unit, said computer readable medium comprising: 3 code for receiving information, comprising authentication data, by said computer center related to updating said control program via a first communication 5 connection; 6 code for sending a request, comprising said authentication data, for an updated 7 control program to an upload server via a second communication connection, comprising an 8 Internet connection; and 9 code for receiving by a download controller said updated control program 10 from said upload server via said second communication connection. 1 28. The computer readable medium of claim 27 further comprising code
- 1 28. The computer readable medium of claim 27 further comprising code 2 for distributing said updated control program from said download controller to said stored 3 control program unit.
- 1 29. A storage device maintenance system for transferring an update to a 2 control program used in a device storage system, comprising a plurality of disk controllers, 3 from a control program upload server via an Internet connection, comprising:

the plurality of disk controllers coupled with the remote console download controller for receiving the update from the first program file. The computer system of claim 29 wherein a disk controller of the plurality of disk controllers comprises a DKC download controller, a program update The computer system of claim 30 wherein the second program file The computer system of claim 31 wherein the update is received by the second program file independent of an associated DKC download controller. A system for updating a control program stored at a device controller, said device controller at a computer center, said system comprising: means for receiving information, comprising authentication data, related to updating a control program from a maintenance center via a first connection; means for sending a request, comprising said authentication data, for said updated control program to an upload server via a second connection; means for receiving said updated control program from said upload server via said second connection; and means for distributing said updated control program to said device controller. A maintenance system for updating a control program, said control 34. program stored at a computer center serviced by said maintenance center, said system comprising: 29

4	means for storing an authentication key for accessing a development center,
5	comprising an upload server, and a file location having a location of an updated control
6	program on said upload server, wherein said authentication key and said file location are
7	received from said upload server;
8	means for sending information, comprising an instruction, said file location
9	and said authentication key, to said computer center a via public network, said instruction
0	requesting said updated control program from said upload server; and
1	means for receiving a result of executing said instruction by said computer
2	center.
1	35. A system for updating a control program comprising:
2	means for sending authentication information to access an update server,
3	having a control program update, to a stored control program unit from a maintenance
4	management server;
5	means for validating the authentication data received by the update server
6	from the stored program control unit, wherein the update server is coupled with the stored
7	program control unit via Internet; and
8	means for receiving the control program update by the stored control program
9	unit from the update server.
1	36. A computer-readable data transmission medium containing a data
2	structure, said data structure for sending information from a maintenance server to a
3	computer center, comprising:
4	a first portion comprising an update mode for updating a control program in
5	the computer center;
6	a second portion comprising a server authentication key for access to an
7	upload server having an updated control program; and
8	a third potion comprising a file location on the upload server of the updated
9	control program.
